EPI-USE LABS
value through innovation

semantik

Enhance business decisions with an AI-driven overview of your landscape

Semantik Map from EPI-USE Labs quickly assesses your entire data landscape, and gives you dynamic dashboards with semantic intelligence. You get the data you need to understand, modernise and optimise your systems.

- Query your data across all systems in real time
- Customise dynamic dashboards with agentic AI
- Download output business reports in PDF format
- Driven by EPI-USE Labs' semantic knowledge
- Uses metadata to avoid data privacy concerns

Do you have disconnected data across multiple systems?

Today's IT landscapes have evolved into complex systems across multiple vendors, and they need integrations to connect them. Many organisations face the challenge of data siloed in unstructured formats across different systems; and this can impact strategic business decisions. To understand where potential data risks and opportunities might lie, and fully embrace the Autonomous Enterprise, you need to assess your data landscape closely.

Get a holistic view of your entire landscape

For over 23 years, EPI-USE Labs has provided detailed system analyses to our clients, providing them with critical insights into their SAP data. Now, Semantik Map looks beyond SAP to deliver a holistic, business-specific view of your entire landscape, including both SAP and non-SAP applications.

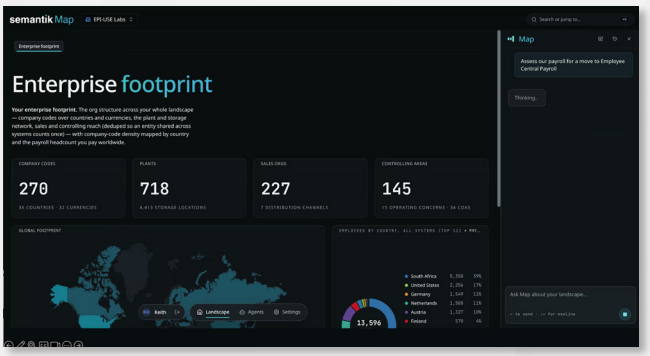

Start with a standard dashboard suited to your needs; then use agentic AI to ask questions in natural language to build your customised dashboard with reports, graphs, and tables.

Semantik Map assesses your data landscape using only metadata, removing data privacy concerns.

Find out how to optimise your projects

Cut through the complexity to get a clearer view of your IT landscape, and where you can optimise. Understanding your data clearly can help you complete projects sooner whilst reducing costs. For example, find out how you can reduce your data footprint or licensing costs before an SAP S/4HANA transformation.

Understanding how data is shared between systems makes your reports more accurate, and supports compliance with data privacy and financial regulations. And with metadata from across your entire system landscape, you can drive improvements more effectively, from everyday fixes to high-impact strategic initiatives.

Semantik Map can help you improve your:

- SAP modernisation strategy
- Database licensing costs
- Data footprint analysis
- Data privacy compliance
- Selective data migration opportunities
- Cross-functional SaaS product suite

The start of the journey

Semantik Map is just the beginning of your Semantik journey. With the other Semantik agents, you can highlight data discrepancies, migrate between technologies, protect sensitive data, create and test datasets to support business changes, and safely archive legacy data. Semantik supports your business throughout the data lifecycle, delivering intelligent, automated processes orchestrated by trusted agentic AI.

As a global software solutions and managed services company, EPI-USE Labs helps you to maximise the performance, management and security of your SAP® and SAP SuccessFactors® systems. Our clients tell us every day how we have transformed their business operations. Contact us to find out how we can help you solve your business challenges.
